Mushfiqur Rahman Pulok	21225103525
Mehedi Hasan Pranto	21225103357
Md Istihad Tamim	21225103318
Sirin akter	21225103542

Supervised By:

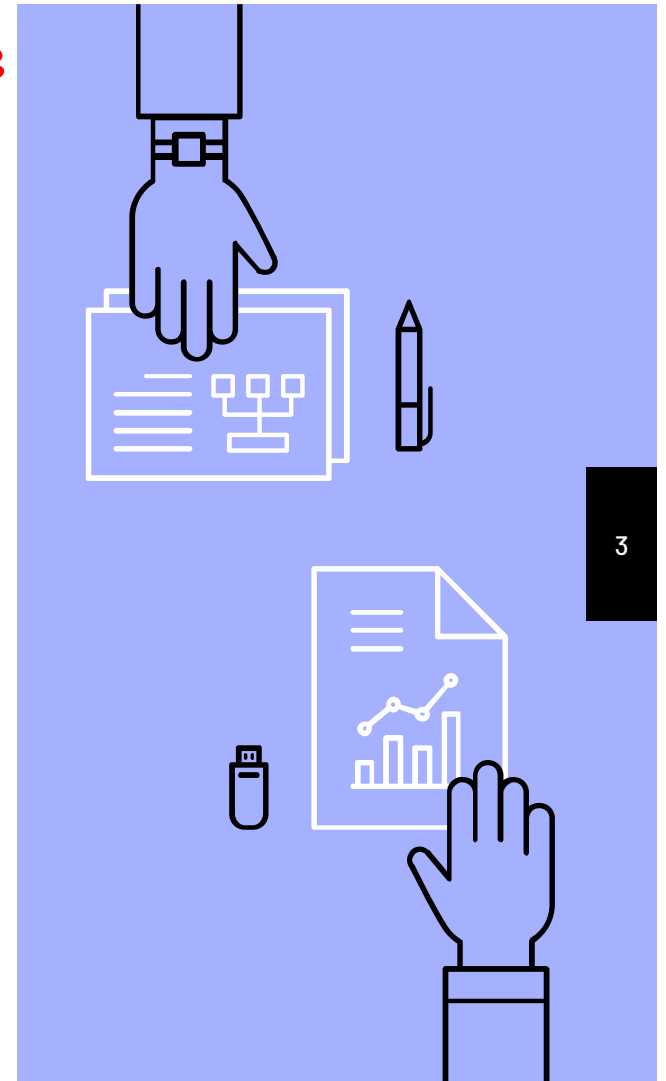

- ▷ Sudipto Chaki
- ▷ Course Instructor
- ▷ Department of CSE
- ▷ Bangladesh University of Business and Technology (BUBT)

Objective:

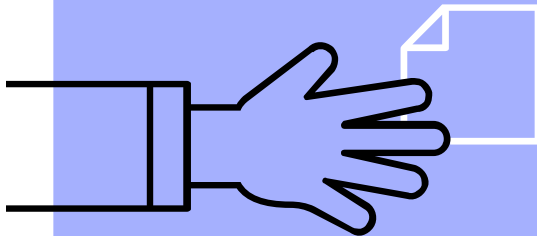

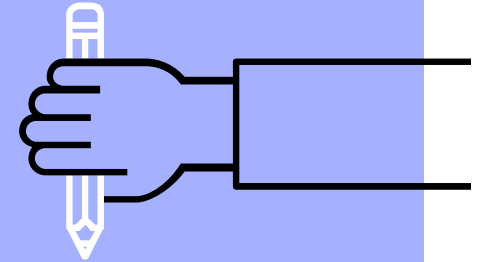

E-banking is an online banking solution that provides a full range of banking services to customers with distinguished user profiles. It features internet banking as its dominant online channel, integrating independent subsystems. The objective is to prepare a software or application, which could maintain data & provide user friendly interface for User. Also user can create an account from any place with Zero (0) balance & personal information..

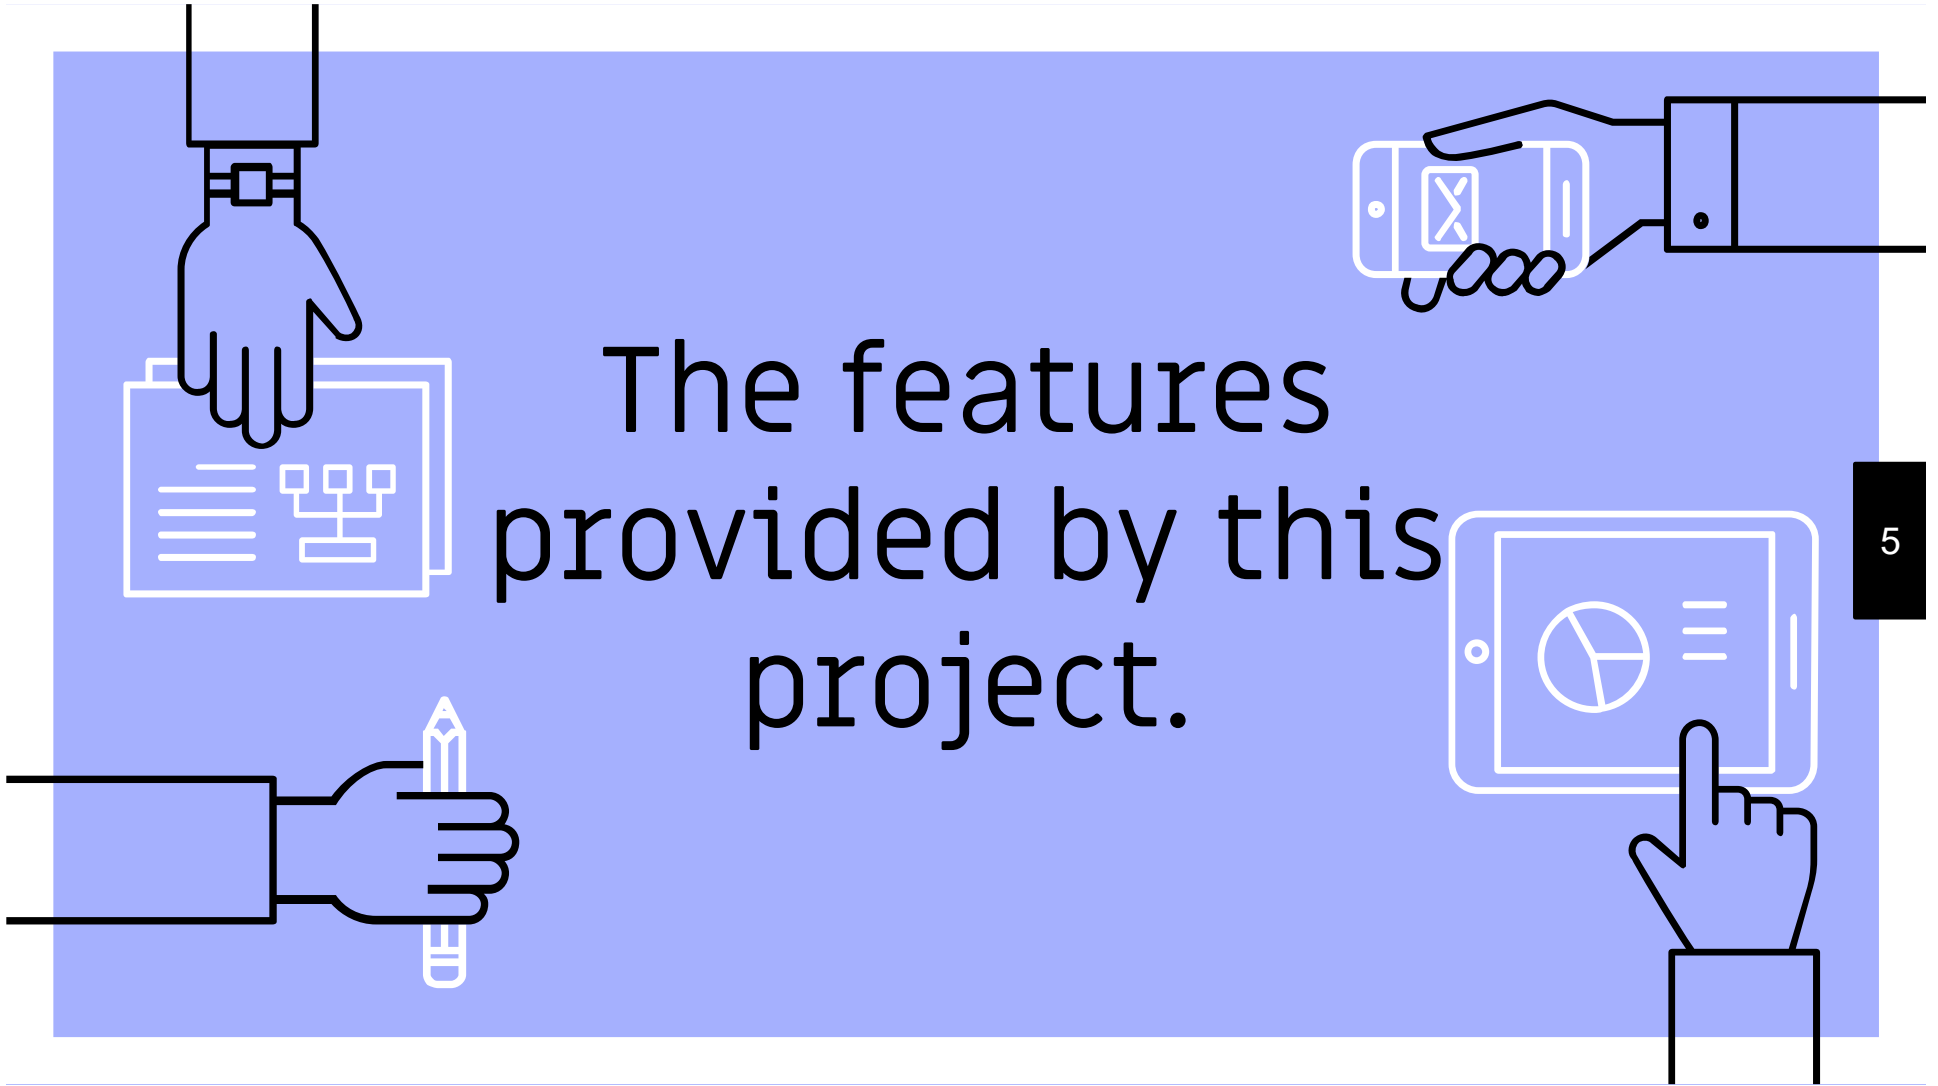

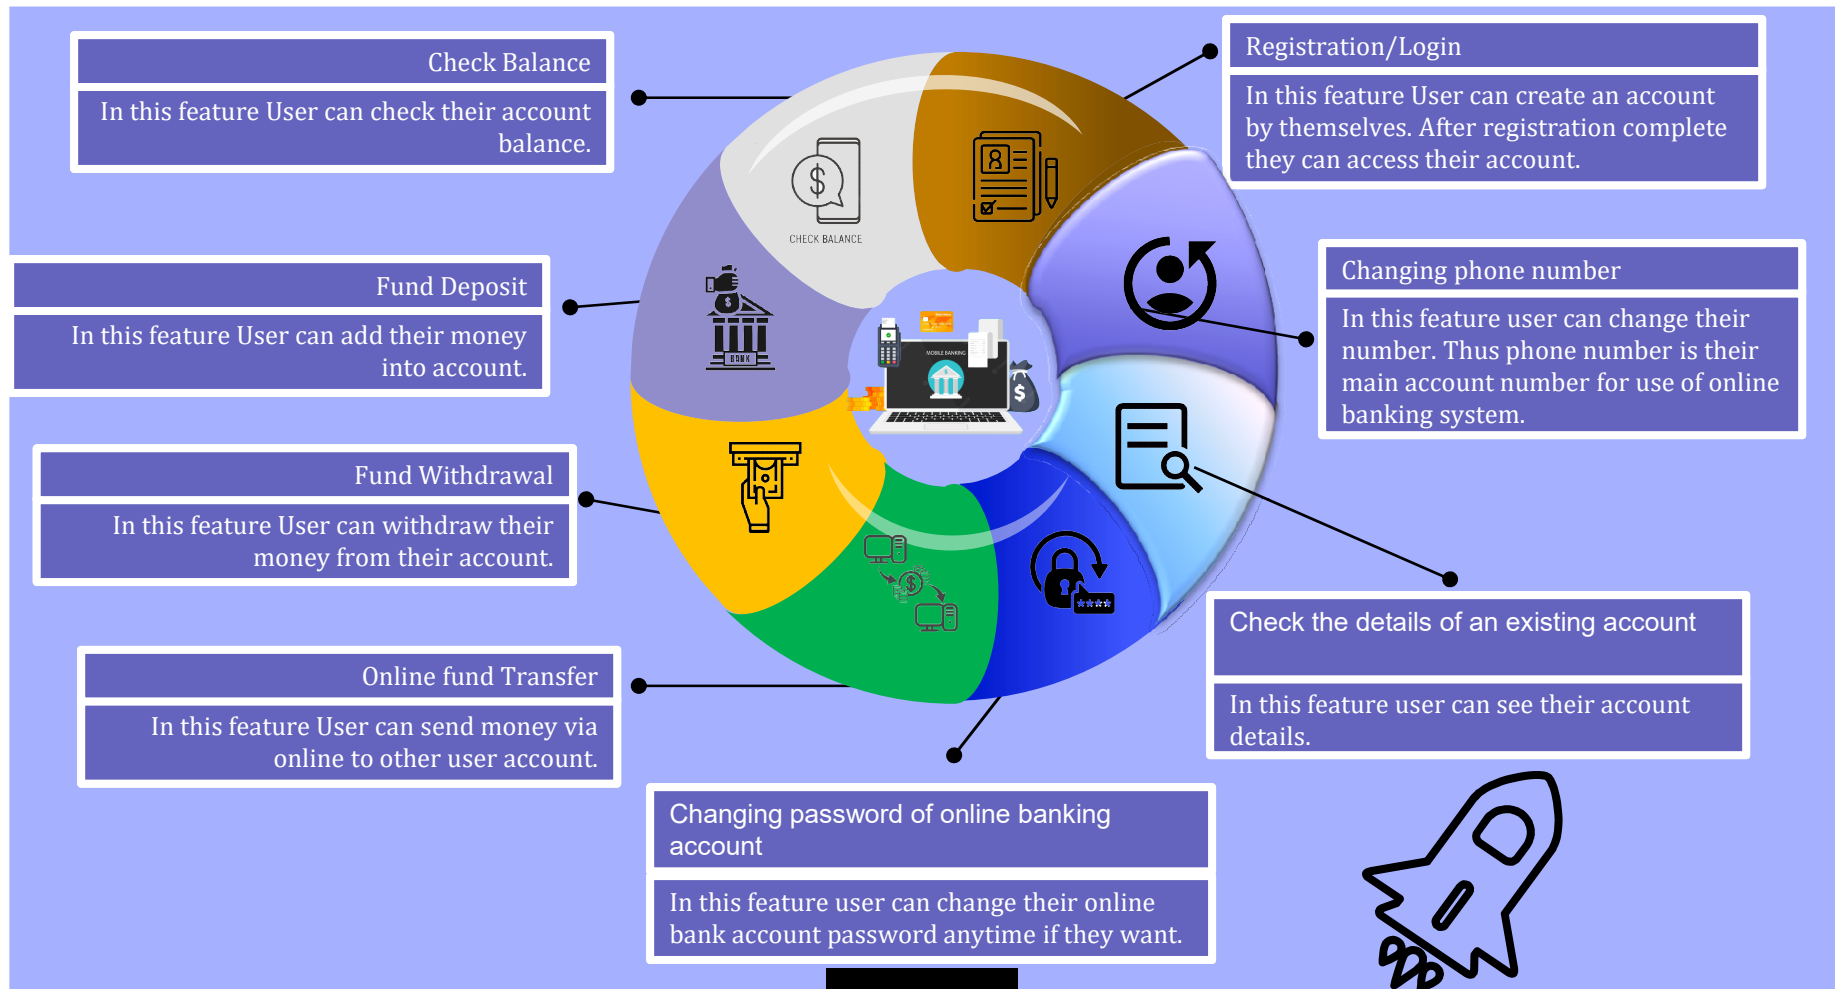

What is our Motivation?

In present system some banks are working software based but most banks are doing it manually. User have to visit bank to Withdrawal or Deposit amount. In present bank system it is also difficult to find account information of account holder. In this bank management system we will automate all the banking process. In our bank management system user can check his balance online and he can also transfer money to other account online. The main purpose of developing bank management system is to design an application, which could store bank data and provide an interface for retrieving customer related details with 100% accuracy.

Project Study

Our limitations

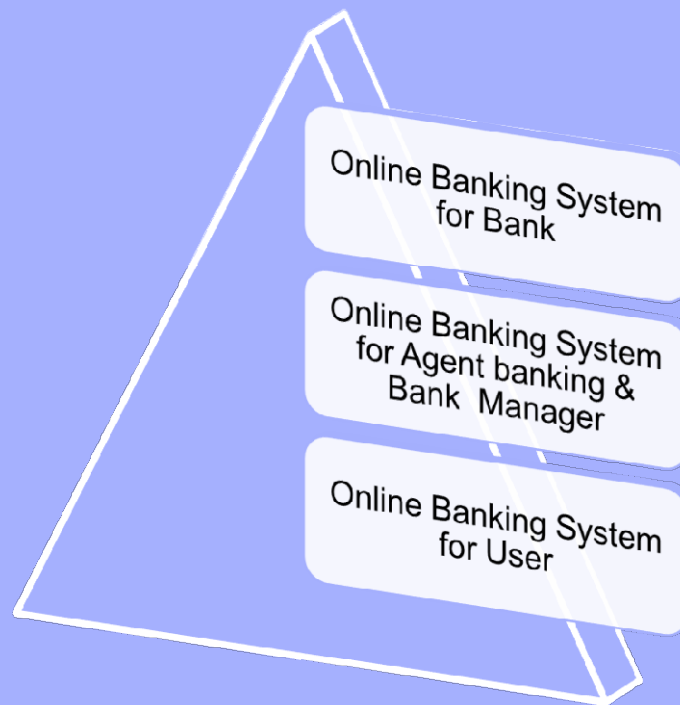

We have some limitations. They are shown below-

Our system can't
verify user
information.

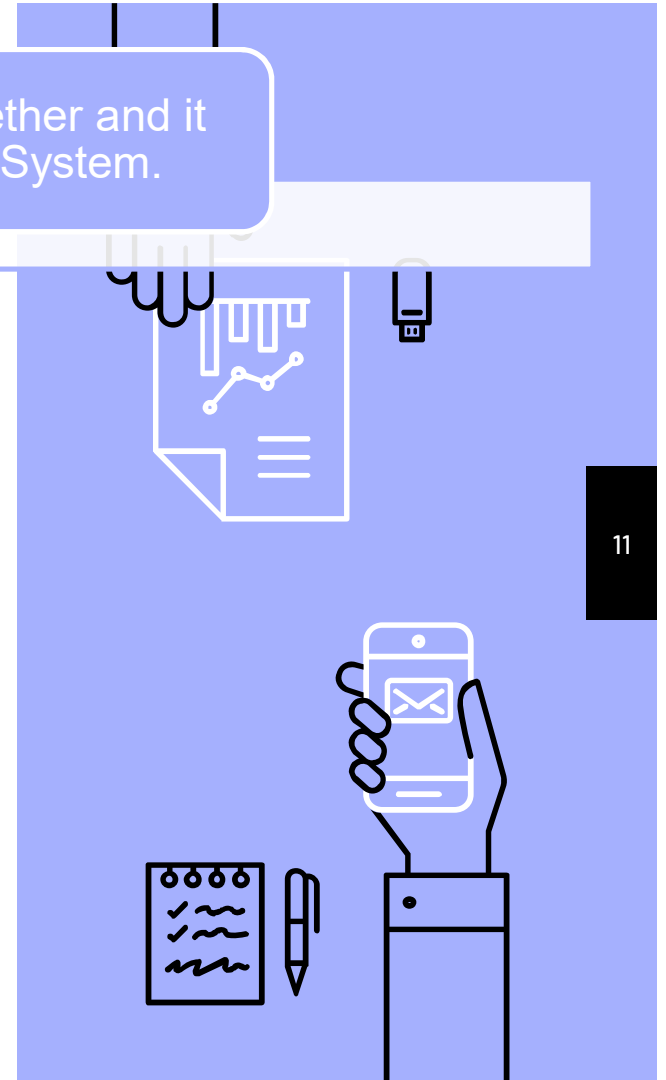

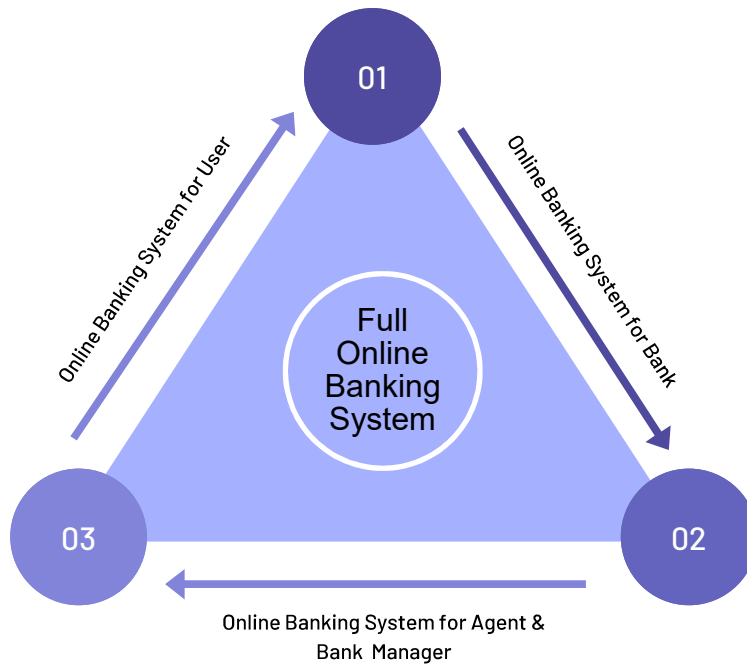

Our system have the
feature for fund deposit but
it can be done by user .So
we need another software
for agent banking or bank
workers for adding fund.

Our system
can't show user
transaction
summary.

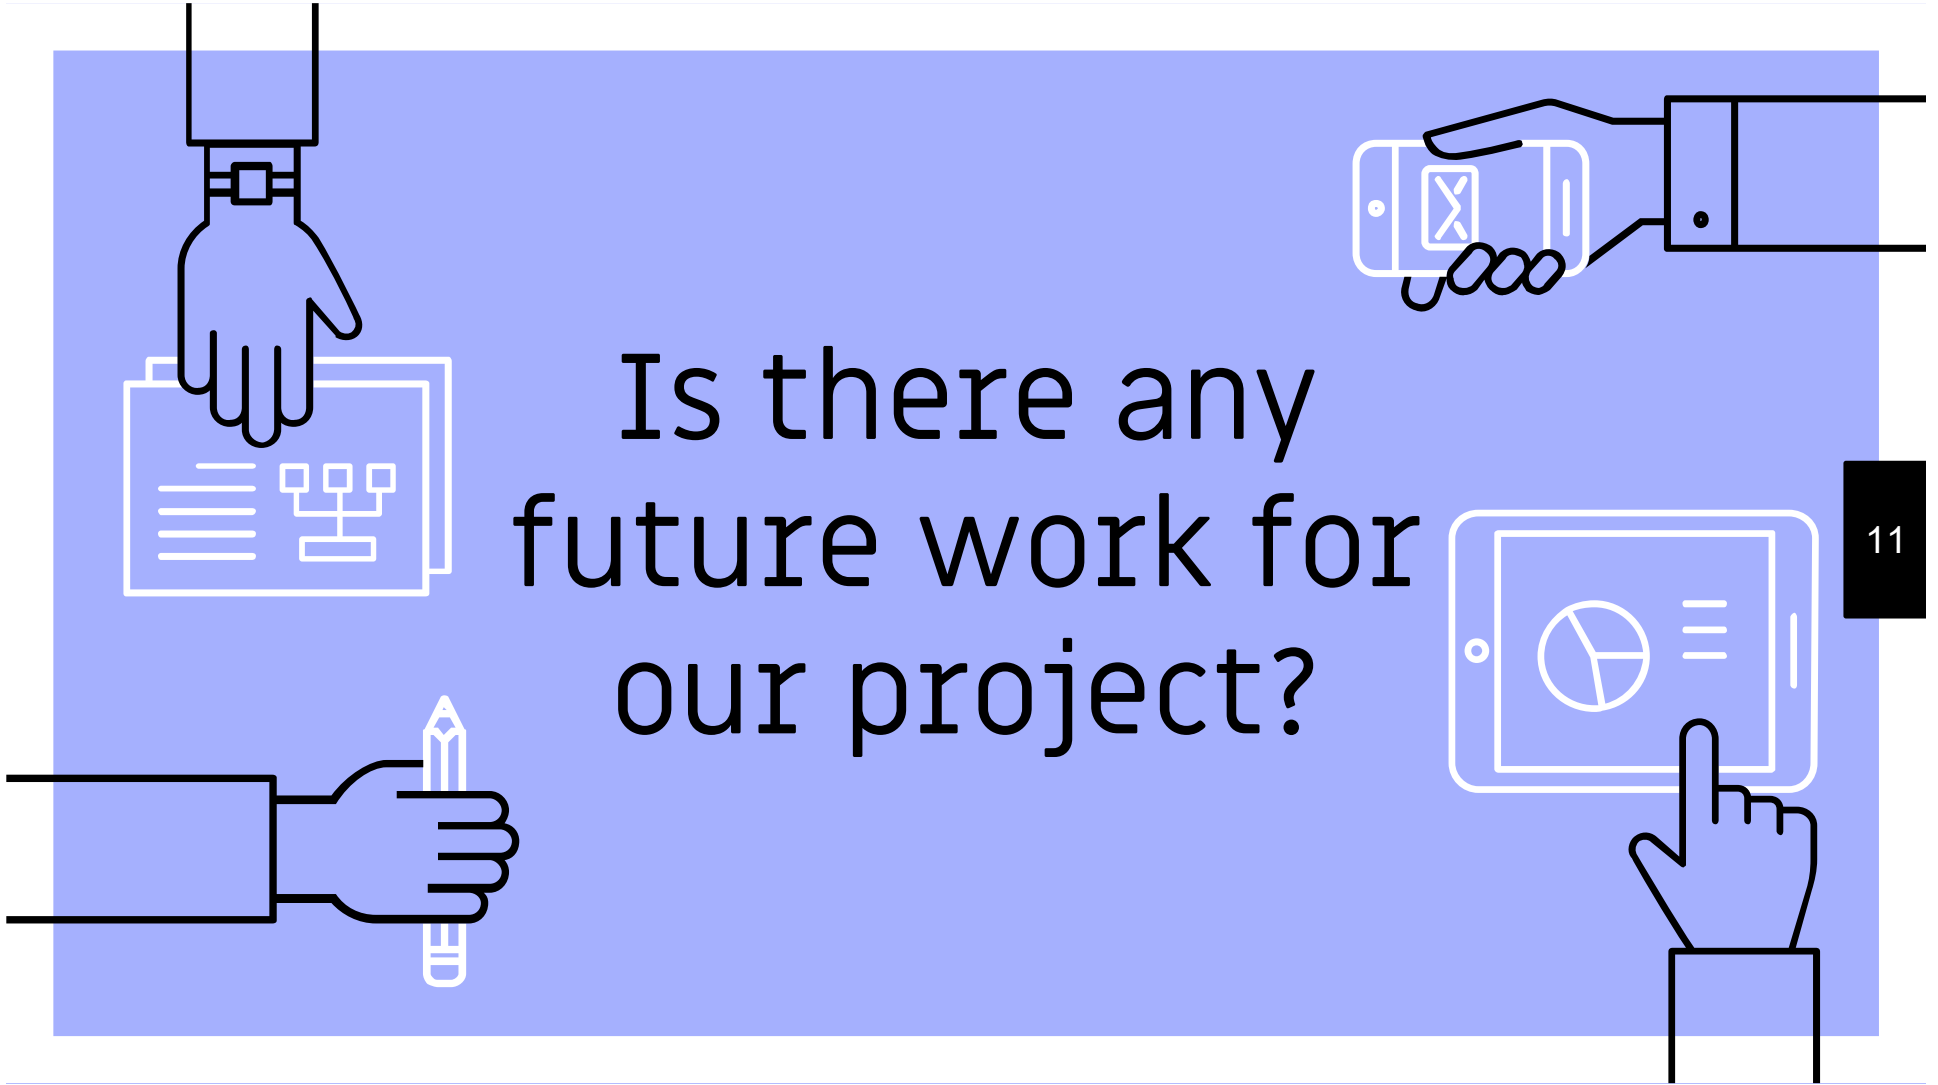

Our project is Online Banking System for User.
For fully Functionable system for Online Banking System it's need total three systems.

This is how three Online Banking System works together and it makes Fully facntionable system for Online Banking System.

Is there any
future work for
our project?

Yes, we have many user friendly features and modification for the project in the near future. Which we couldn't do this time due to lack of manpower & fund.

Pay Bill

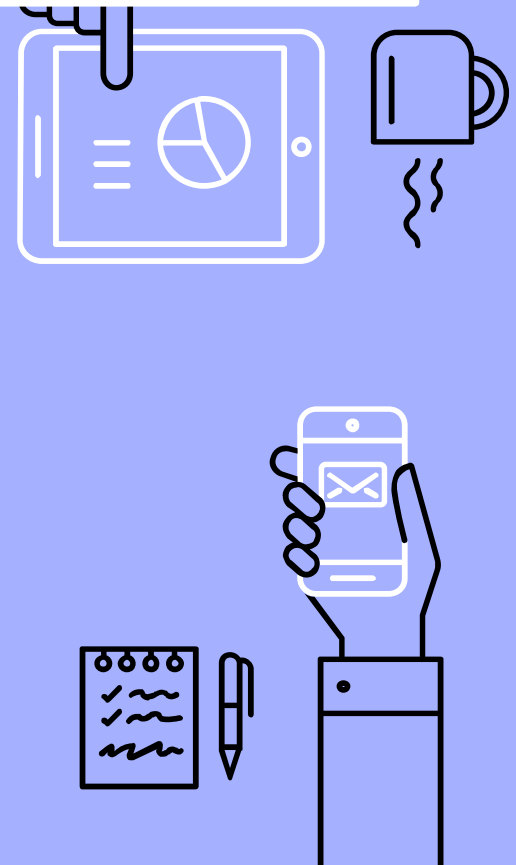

In this feature user can pay bill to various company and services.

Add & send Funds from others bank

In this feature user can add or send money to other banks.

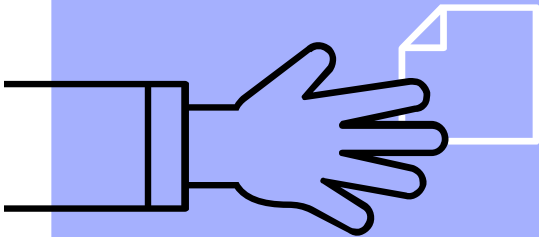

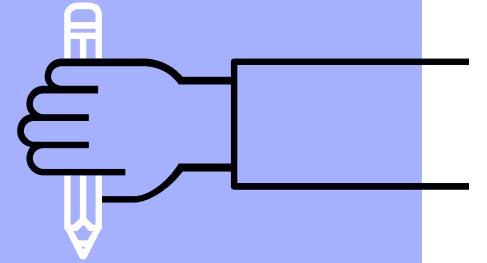

Mobile Recharge

In this feature user can recharge in their phone number by few clicks.

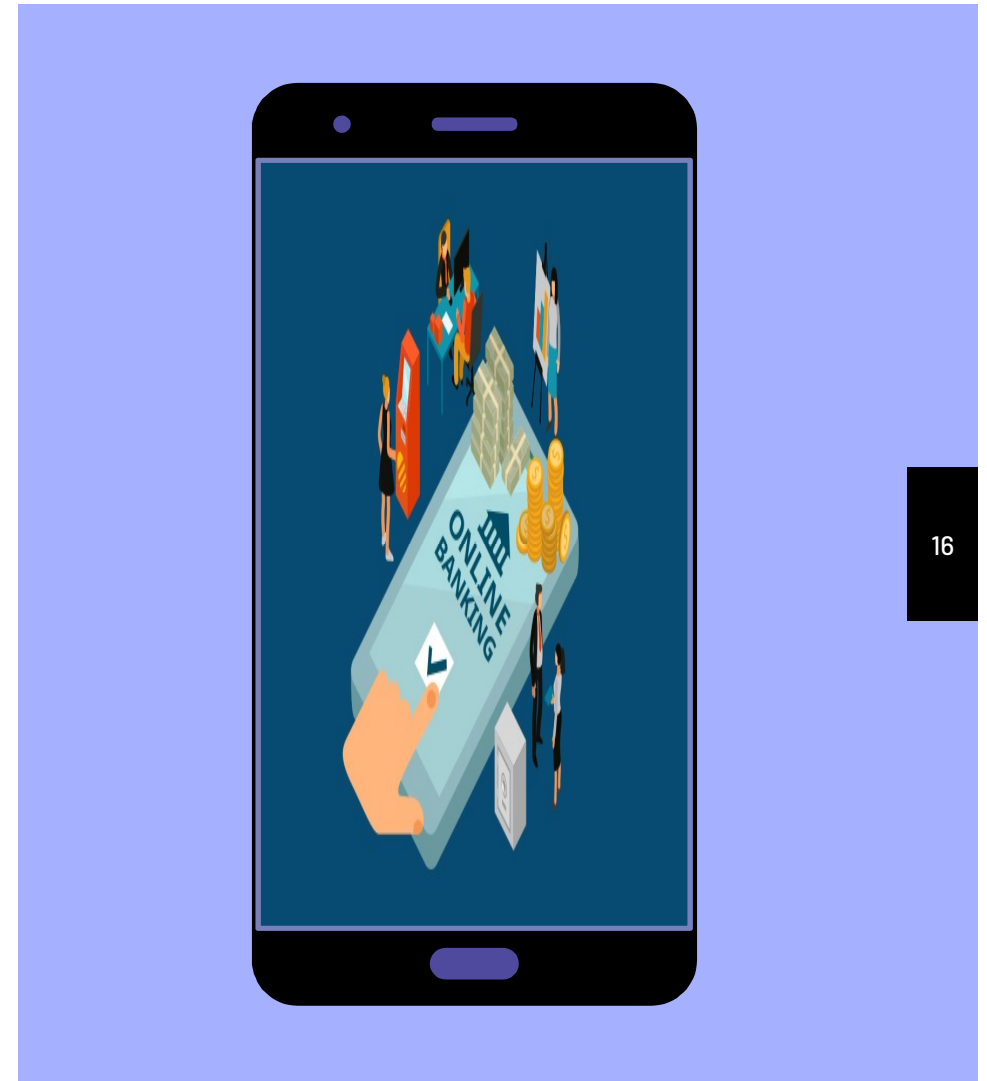

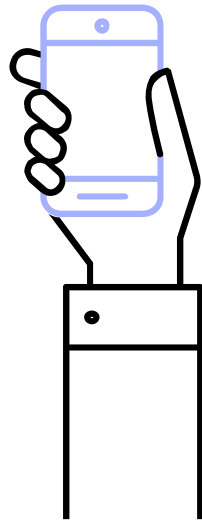

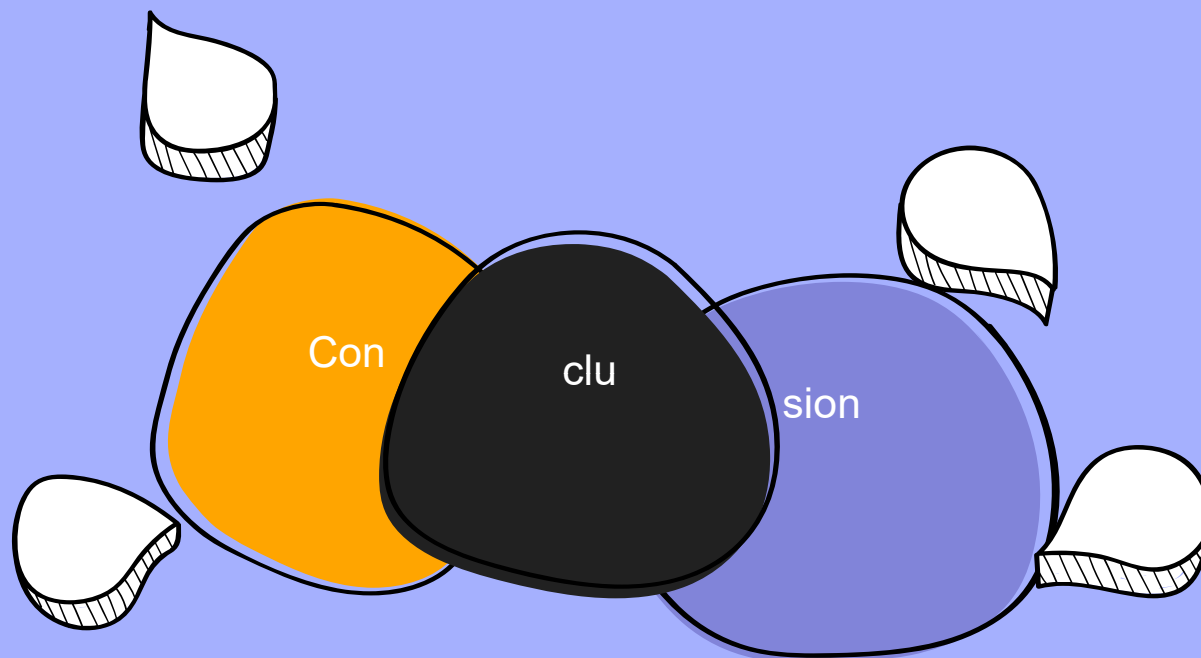

What is the
outcome of this
project?

Outcome of the project is user will be able to manage their bank account and transactions in any place without much hassle. They can send money or withdraw & add money with just some clicks.

❑ Internet banking is changing the banking industry and is having the major effects on banking relationships.

❑ The net banking, thus “now is more of a norm rather than an exception in many developed countries” due to the fact that it is the economical way of providing banking services.

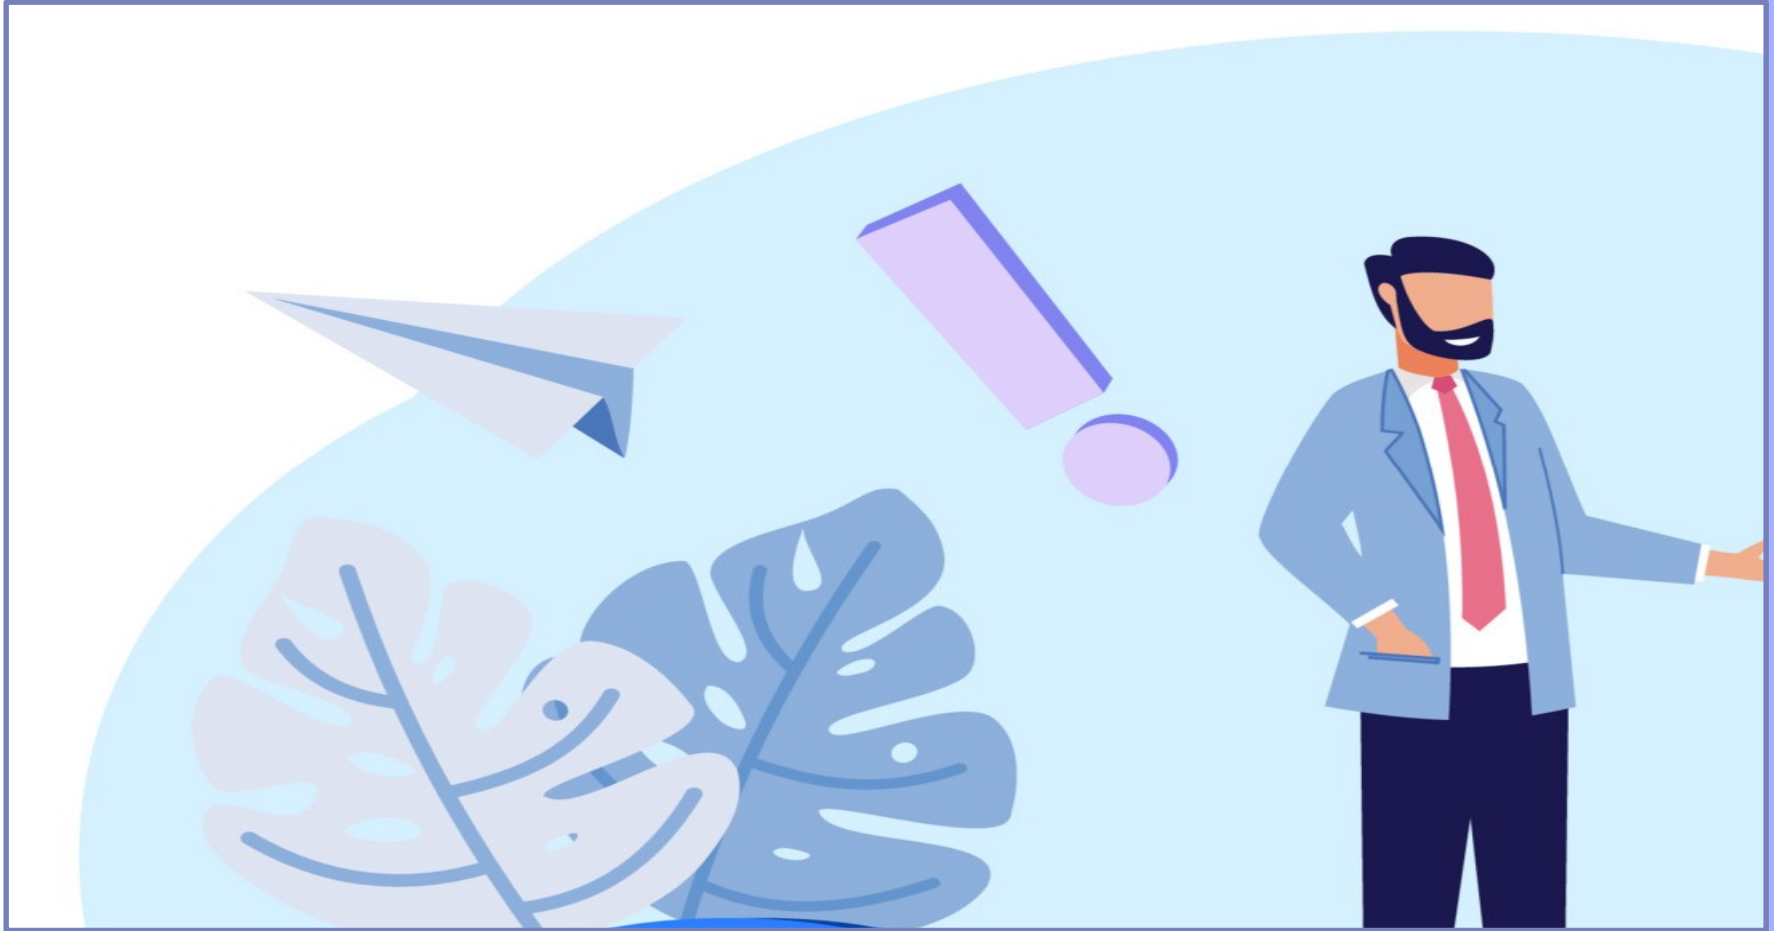

❑ Banking is now no longer confined to the traditional brick and mortar branches, where one has to be at the branch in person, to withdraw cash or deposit a cheque or request a statement of accounts.

❑ Providing internet banking is increasingly becoming a ‘need to have’ than a nice to have ‘services.

❑ In a country like Bangladesh, there is need for providing better and customized services to the customers. Banks must be concerned about the attitude of customer with regard to acceptance of internet banking.

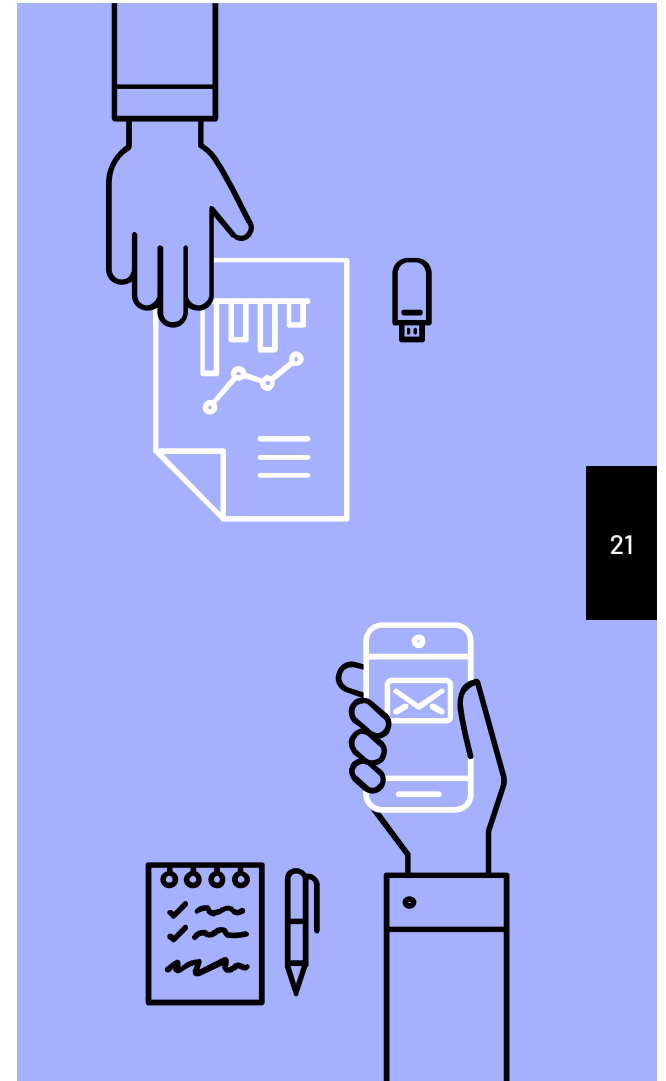

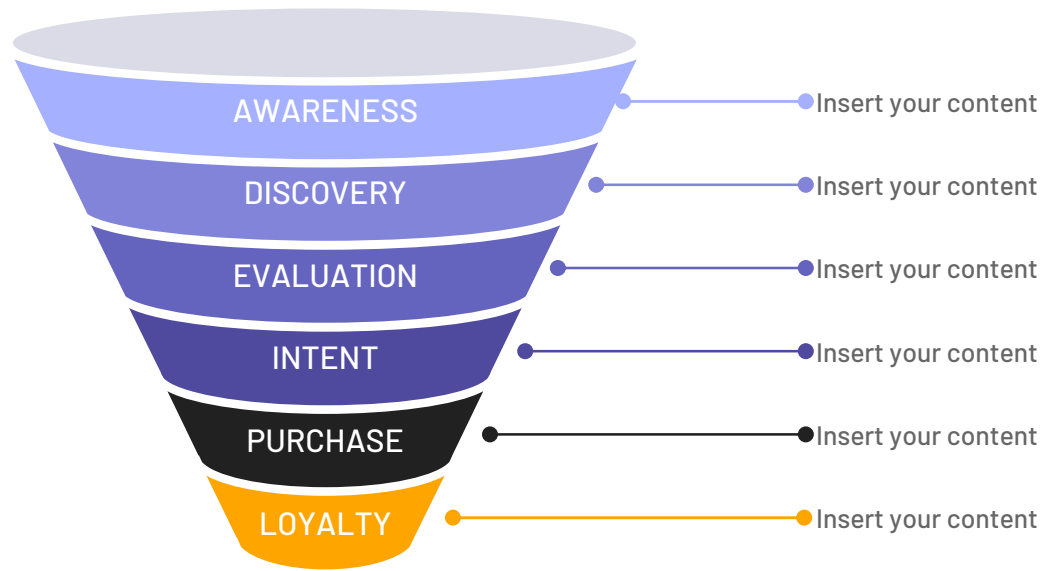

❑ The strategy of bank is to provide value added services and products to the consumer, utilizing the internet extensively.

❑ The main aim of internet banking is to making transactions through online process and make customer more beneficial

EXTRA GRAPHICS

SlidesCarnival icons are editable shapes.

This means that you can:

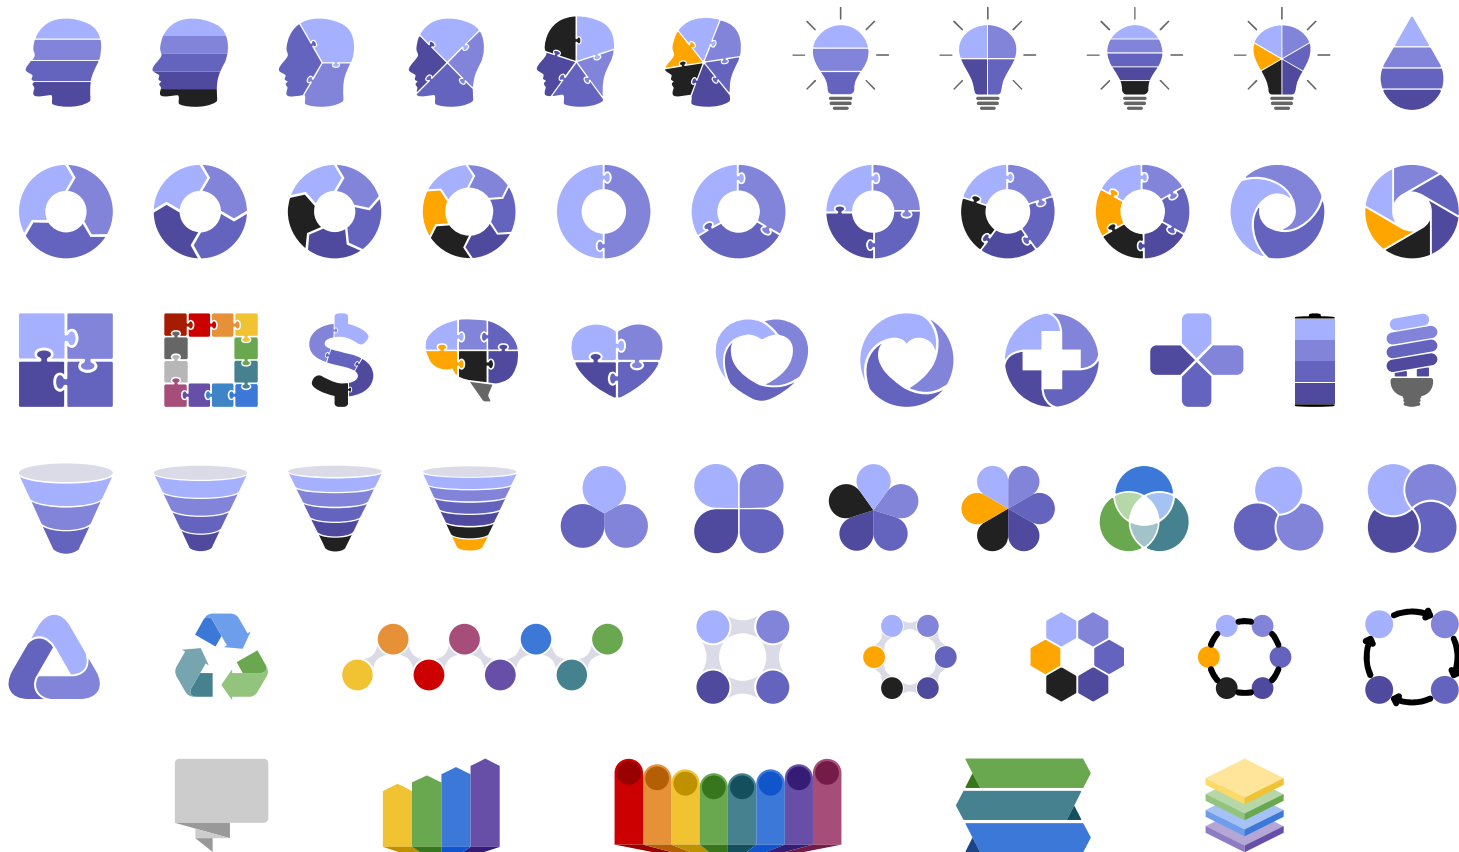

- Resize them without losing quality.
- Change line color, width and style.

Isn't that nice? :)

Examples:

DIAGRAMS AND INFOGRAPHICS

You can also use any emoji as an icon!

And of course it resizes without losing quality.

How? Follow Google instructions
